

State Chart Book: Comparison of Predicted Premium Differences across Counties under the Affordable Care Act and the American Health Care Act

State: **Hawaii**

About this Chart Book:

This State Chart Book supplements NASHP's brief, [Health Care is Local: Impact of Income and Geography on Premiums and Premium Support](#). Using data and modeling from the Kaiser Family Foundation, we present estimated premiums and tax credits under current law created by the Affordable Care Act (ACA) and under the American Health Care Act (AHCA) by high and low cost regions and by age and income.¹

The Kaiser Family Foundation analysis assumes that the majority of states will adopt the AHCA's option to expand the allowable age rating ratio from 3-to-1 to 5-to-1—with the exception of Massachusetts, New York, Vermont and the District of Columbia, which have established separate rating bands in state law that are the same or lower than the 3-to-1 ratio. The data do not account for the potential adoption of waivers to provide less comprehensive coverage which could lower premiums, as provided as state option under the AHCA – although it is important to note those lower premiums would be more than offset by increases in total out-of-pocket costs as estimated by the CBO. The Kaiser Family Foundation data account for anticipated non-enforcement of the individual mandate, which the Congressional Budget Office (CBO) predicts could increase premiums by an additional 15 to 20 percent; data also account for the AHCA risk stabilization programs states could adopt to help offset insurance cost. Experts have questioned the adequacy of these funds to significantly address costs.² We also note that estimates do not reflect the effect of the AHCA's proposed changes to Medicaid, including repeal of Medicaid expansion and proposed changes to Medicaid funding. We believe the data may underestimate premium increases under the AHCA that could be caused by the shift of Medicaid populations into private coverage, particularly for those states that expanded Medicaid eligibility above 138 percent of the Federal Poverty Level.

Note that these estimates *only* consider premium costs – they do not incorporate any analysis of predicted out-of-pocket expenses due to cost-sharing. Thus, this analysis only provides a partial picture of how consumer costs may shift due to changes incurred under the AHCA. The AHCA's proposed elimination of Cost Sharing Reduction payments (CSR) and predicted stimulation of high-deductible health plans, for example, are expected to increase out-of-pocket spending, with especially significant increases predicted for consumers in states that opt to waive Essential Health Benefits or guaranteed issue requirements under the AHCA.³

Methodology:

NASHP sorted all counties into even groups (usually quintiles) by gross premium rate; counties highlighted in this report are those with the highest population within each grouping. The data identifies 27-, 40- and 60- year olds that, respectively, have annual incomes of \$20,000, \$30,000, \$50,000 or \$75,000 and projects potential total premium, tax credit and premium share paid directly by the consumer in high and low cost counties (where applicable) in the state in 2020.

Comparison of Predicted Premium Differences across Counties under the Affordable Care Act and the American Health Care Act

State: **Hawaii**

Estimated premium variation by age

As Figure 1 shows, by 2020 a 27-year-old consumer in Hawaii could see prices as low as \$3,710 per year. In contrast, a 60 year old could see prices as high as \$13,990 per year. Hawaii is one of the seven states that has identified a single rating area for the purposes of health insurance rating, meaning there is no premium variation across counties.

Figure 1 – Estimated Gross AHCA Premiums by Age in 2020

All data for this report were adapted from analysis conducted by the Kaiser Family Foundation (which contains data for every county).⁴ See State Fact Sheet Overview for further details on the data source and limitations.

⁴ Kaiser Family Foundation, "Premiums and Tax Credits Under the Affordable Care Act vs. the American Health Care Act: Interactive Maps" (April 27, 2017): <http://kff.org/interactive/tax-credits-under-the-affordable-care-act-vs-replacement-proposal-interactive-map/>.

AHCA would have disproportionate effects across age groups and income levels

Regional market conditions cause variation in premiums charged across states. The Affordable Care Act's (ACA) tax credit structure is adjusted to reflect differences in region, age, and income. By contrast, the American Health Care Act (AHCA) provides a flat tax credit based on age, and capped for individuals making over \$75,000 per year. The charts below reflect predicted tax credits and consumer (net) premium based on premiums costs estimated by the Kaiser Family Foundation under the ACA and AHCA in 2020.

Figure 2a – Premium Cost to Consumer after Tax Credit, under the ACA & AHCA, in 2020

(estimated for individual earning \$30,000 per year)

Figure 2b – Comparing Estimated ACA and AHCA Premiums and Tax Credits, by Age and Income, in 2020

Table 1 – Comparing Estimated ACA and AHCA Premiums and Tax Credits, by Age and Income, in 2020

	TOTAL PREMIUM (\$)			TAX CREDITS (\$)			CONSUMER PAYS (\$)		
	ACA	AHCA	Change	ACA	AHCA	Change	ACA	AHCA	Change
Age 27									
\$20,000 /yr	4,020	3,710	-310	3,300	2,000	-1,300	720	1,710	+990
\$30,000 /yr	4,020	3,710	-310	1,890	2,000	+110	2,130	1,710	-420
\$50,000 /yr	4,020	3,710	-310	0	2,000	+2,000	4,020	1,710	-2,310
\$75,000 /yr	4,020	3,710	-310	0	2,000	+2,000	4,020	1,710	-2,310
Age 40									
\$20,000 /yr	4,900	4,900	0	4,180	3,000	-1,180	720	1,900	+1,180
\$30,000 /yr	4,900	4,900	0	2,770	3,000	+230	2,130	1,900	-230
\$50,000 /yr	4,900	4,900	0	0	3,000	+3,000	4,900	1,900	-3,000
\$75,000 /yr	4,900	4,900	0	0	3,000	+3,000	4,900	1,900	-3,000
Age 60									
\$20,000 /yr	10,410	13,990	+3,580	9,690	4,000	-5,690	720	9,990	+9,270
\$30,000 /yr	10,410	13,990	+3,580	8,280	4,000	-4,280	2,130	9,990	+7,860
\$50,000 /yr	10,410	13,990	+3,580	5,310	4,000	-1,310	5,100	9,990	+4,890
\$75,000 /yr	10,410	13,990	+3,580	0	4,000	+4,000	10,410	9,990	-420
