Infertility after Cancer Treatment

Recently, a number of states have mandated coverage of “fertility preservation” – removal and storage of eggs and sperm – prior to undergoing cancer treatment. This represents a trend that is likely to continue as more states recognize the need to support patients facing cancer treatment. It also highlights the importance of state actions to support fertility preservation in the broader context of cancer care.

NASHP is partnering with Mathematica to help states take effective action to address rising drug prices. Currently, five states require manufacturers to report on and justify drug price increases. NASHP is working with these states and partnering with Mathematica to help states collect data on rising drug prices, and the reasons behind them, to help states take effective action to address them. NASHP is partnering with Mathematica Policy Research to help states strengthen Rx transparency laws. NASHP partners with Mathematica to help states take effective action to address rising drug prices.
