States Promote Recovery for Women with Substance Use Disorder

The opioid epidemic has heightened states' efforts to prevent and address substance use disorder in pregnant and parenting women. States are turning to behavioral health strategies to improve health outcomes and access to care, address unmet needs, and help communities of color overcome barriers to care.

NASHP interviewed officials from Colorado, Pennsylvania, and Texas about their unique interagency approaches to promote recovery for this under-served population. Read a Texas blog about their unique interagency approaches to promote recovery for this under-served population, and explore the full report, States Promote Recovery for Women with Substance Use Disorder.

MD's Health Enterprise Zones Reduce Hospital Costs in Underserved Areas

A recent analysis found that Maryland’s health enterprise zones (HEZs) substantially reduced hospital costs in underserved areas of the state. HEZs are economic development zones designed to improve health care access and outcomes in areas that are economically disadvantaged areas with poor health indicators.

The analysis found that HEZs generated a net cost savings to the state through a reduction in inpatient hospital stays. Maryland’s enterprise zones provide financial incentives, such as hiring tax credits and loan guarantees, to providers including community health centers and other health-care providers. These are the key findings:

- Reduction in inpatient hospital stays: 17.8%
- Reduction in costs: $15.6 million
- Number of hospital stays avoided: 7,121
- Net cost savings generated: $15.6 million

MD's Health Enterprise Zones Reduce Hospital Costs in Underserved Areas. This recent analysis of Maryland's health enterprise zone generated a net cost savings to the state through a reduction in inpatient hospital stays. Maryland's enterprise zones provide financial incentives, such as hiring tax credits and loan guarantees, to providers including community health centers and other health-care providers. These are the key findings:

- Reduction in inpatient hospital stays: 17.8%
- Reduction in costs: $15.6 million
- Number of hospital stays avoided: 7,121
- Net cost savings generated: $15.6 million
