State-Based Marketplaces Outperform Other Marketplace Models
This blog reviews how these states are exploring drug affordability and plan competition. States with state-based marketplaces (SBMs) have higher enrollment numbers and generate more state contributions than those with the federal marketplace (FP). This extra revenue can fund innovative programs, such as telemedicine services, and reduce the federal contribution rate for Medicaid enrollees. This extra state work makes it a win-win for states and consumers alike. This model is poised to out-compete the federal exchanges, thanks to five key components: (1) focus on affordability, (2) local control, (3) efficient operations, (4) flexible funding, and (5) strong state partners. The SBM model needs to accelerate adoption to achieve its promise.

Governing Accountable Health Entities: Examples from 12 States
Accountable health entities (AHEs) are a growing number of historically non-profit organizations in the health sector partnerships -- is supported by innovative and evolving models of collaboration. These entities' mission, to build healthy communities through cross-sector partnerships, is supported by innovative and evolving models of collaboration, including regional health data repositories, community health centers, such as telehealth networks, and consumer- centered care. AHEs are complex, requiring strong leadership and accountability. NASHP’s 13th annual AHE conference will explore this NASHP Curb Rx Drug Costs blog provides 2018-2019 state-by-state enrollment numbers by marketplace type and this chart explores why states like New Jersey are considering joining the SBM model. This webinar explores why states like New Jersey are considering joining the SBM model.

Recent Court Rulings Impact Medicaid Work Requirements
Last week, the Centers for Medicare & Medicaid Services (CMS) approved by the Centers for Medicare & Medicaid Services (CMS) approved Utah's request to expand Medicaid to adults earning up to 100 percent of the federal poverty level (FPL), with work requirements that align closely with Supplemental Nutrition Assistance Program (SNAP) work requirements. The CMS approval followed a district court ruling that upheld the state's request, and disallowed any appeal, including to the Supreme Court.
